Summary

Senior iOS Engineer with 8+ years of experience building high-performance iOS applications in Swift for Nike ME, Under Armour ME, and Sun & Sand Sports. Specialized in SwiftUI, UIKit, MVVM, Clean Swift, and VIPER architectures. Reduced crash rates by 30%, optimized app performance by 40%, and mentored 5+ iOS developers. Early adopter of AI tools (Ollama, MCP, GitHub Copilot, Cursor) for code generation, testing, and CI/CD automation with fastlane, Bitrise, and GitHub Actions.

Technical Skills

- Languages: Swift, Objective-C, Shell Script, SQL
- iOS Frameworks: UIKit, SwiftUI, AppKit, Catalyst, AVFoundation, CloudKit, CoreData, SwiftData, CoreLocation, Background Tasks, APNS, PushKit, RxSwift, Combine, async/await, Structured Concurrency, Actors, App Intents, Siri Shortcuts
- Architecture Patterns: MVC, MVVM, VIPER, Clean Swift
- UI Implementation: Auto Layout, SnapKit, XIB, Storyboards, Programmatic UI, RTL Support, Responsive Design
- Testing & Quality: XCTest, XCUITest, Unit Testing, UI Testing, Test-Driven Development, Code Coverage
- Databases & Persistence: CoreData, SwiftData, SQLite, PostgreSQL, Keychain Services
- Dependency Management: CocoaPods, Swift Package Manager (SPM)
- Third-Party Integration: Firebase (Crashlytics, Analytics, Auth, Remote Config, A/B Testing), Google Analytics 4, Facebook SDK, Branch, MoEngage, Salesforce SDK, Kingfisher
- Authentication & Security: OAuth 2.0, JWT, Session Management, SSO, SAML
- Networking: RESTful APIs, GraphQL, WebSockets, gRPC, URLSession, Alamofire, JSON:API Specification
- CI/CD & DevOps: fastlane, Bitrise, Azure Pipelines, GitHub Actions, Jenkins, Firebase Distribution, TestFlight, App Store Connect (full release cycle)
- Development Tools: Xcode, Instruments (Time Profiler, Leaks), LLDB, Memory Graph Debugger, Charles Proxy, Postman (PreRequest/PostResponse Scripts, Automated API Testing), Swagger, Git
- Infrastructure: Docker, Docker Compose, AWS EC2, Oracle Cloud, Unix/Linux Administration
- Methodologies: Agile/Scrum, Test-Driven Development, Code Review, Pair Programming, Gitflow
- AI & Agentic Workflows: Ollama, Claude API, Cursor AI, GitHub Copilot, OpenCode, Agentic AI, Prompt Engineering, Function Calling / Tool Use, LLM Tool-Calling APIs, MCP Servers (Custom Swift, Xcode, Azure DevOps, Figma bridge), Kiro, Mistral
- Automation & Scraping: n8n (Docker / Oracle Cloud hosted), Web Scraping / Data Extraction, Google Sheets API, Telegram Bot API, Cron Scheduling, Power Automate, Google Apps Script, macOS LaunchAgents, Shortcuts App
- Design Collaboration: Figma, Sketch, InVision, Human Interface Guidelines

Experience

Senior iOS Software Engineer
Brainvire Infotech Pvt. Ltd. | May 2021 – Present

- Led iOS development for Nike ME, Under Armour ME, and Sun & Sand Sports apps serving 10K+ active users, architected scalable features (recommendations, rewards, checkout, inventory) with 30% crash reduction and 40% performance improvement.
- Integrated Ollama local LLMs and MCP tools into Xcode, reducing boilerplate code by 35% and accelerating prototyping.
- Built a custom MCP (Model Context Protocol) server in Swift to log work directly on the company portal; AI agents connect to the local MCP to automate worklog entry via LLM Function Calling / Tool Use.
- Deployed a self-hosted n8n pipeline (Docker + Oracle Cloud) for automated web scraping of job postings, with a custom n8n node for AI-driven job-relevance filtering, Google Sheets logging, and cron-triggered Telegram notifications.
- Used OpenCode as a terminal-based agentic AI assistant integrated with Atlassian, Bitbucket (PR review), Figma (design-to-code implementation), and GitHub (PR creation and code review) for end-to-end development automation.
- Automated API testing in Postman using PreRequest and PostResponse scripts, building full reusable API test runs for regression testing.

- Optimized API integrations and caching, reducing network calls by 25% and improving responsiveness by 40%.
- Mentored 5+ iOS developers on Swift best practices, MVVM, and VIPER architecture.
- Built CI/CD pipelines with fastlane and Bitrise, cutting deployment time by 50%.

iOS Software Engineer
Tristate Technology LLP | June 2018 – May 2021

- Developed 6+ modular iOS applications using Swift, UIKit, and MVVM architecture, improving code reusability and maintainability across a 4-developer team.
- Integrated RESTful APIs with robust error handling and offline support, ensuring seamless user experience across network conditions for 5K+ users.
- Implemented advanced multithreading using GCD and Operation Queues, improving app responsiveness by 45%.
- Collaborated with UX/UI designers to implement pixel-perfect interfaces and smooth animations using Auto Layout and programmatic UI.
- Reduced crash rates by 20% and memory footprint by 20% through Instruments profiling, defensive programming, and XCTest/XCUITest coverage.
- Participated in code reviews and pair programming, contributing to team knowledge sharing and code quality improvement.

Key Projects

Under Armour ME – Lead iOS Developer
July 2022 – Present | Team Size: 3 developers
App Store: apps.apple.com/ae/app/under-armour-me-shop-online/id1591394964

- Implemented personalized recommendations, QR scanning, and location-based in-store experiences.
- Built analytics tracking system capturing 20+ conversion events using Branch, MoEngage, and GA4.
- Integrated Tabby/Tamara BNPL gateways and Salesforce customer support chat.
- Enabled CMS-driven banner updates, eliminating app store submissions for marketing promotions.
- Delivered 20+ production releases with zero critical post-release bugs.
- Technologies: Swift, MVVM, Combine, Branch, MoEngage, Salesforce SDK.

Nike ME App – Senior iOS Developer
April 2024 – Present | Team Size: 6 developers
App Store: apps.apple.com/ae/app/nike-sportswear-sneakers/id6444790147

- Architected modular app using MVVM pattern with SwiftUI-based product catalog and checkout flows.
- Reduced crash rate from 2.1% to 0.3% and achieved 60 FPS scrolling for 1K+ products by optimizing main thread operations.
- Integrated Apple Pay and bilingual support (Arabic/English) for regional users.
- Technologies: Swift, SwiftUI, MVVM, Apple Pay, Firebase, Time Profiler.

Sun and Sand Sports – Senior iOS Developer
September 2021 – Present | Team Size: 6 developers
App Store: apps.apple.com/us/app/sun-sand-sports-shop-online/id1163601891

- Designed multi-brand e-commerce platform with custom filtering handling 10K+ SKUs with instant results.
- Optimized image loading with Kingfisher caching strategy, reducing bandwidth usage by 35%.
- Redesigned homepage using JSON:API standard for flexible CMS-driven content management.
- Integrated Knet and multiple regional payment gateways; added KML-based Google Maps delivery areas.
- Technologies: Swift, Clean Swift, UIKit, JSON:API, Kingfisher, Google Maps, Memory Graph Debugger.

Additional Projects

- Medznat (App Store): Medical knowledge platform with video playback (YouTube/Vimeo) and bilingual support (English/Russian).
- Trophy Cloud (App Store): Automotive event platform with real-time Socket chat and participant voting system.
- TFL Podcasts (App Store): Audio streaming app with AVKit, offline playback, and SQLite for player state management.
- Anco Turf (App Store): E-commerce platform with MapKit delivery tracking and product visualization tools.
- Strawl App Backend: RESTful API backend built with Perfect Swift framework on AWS featuring JWT authentication, database schema design, and CI/CD pipeline setup.

Education

Bachelor of Engineering in Information Technology
Government Engineering College, Modasa | Gujarat, India | 2014–2018

Certifications

- AI For Developers With GitHub Copilot, Cursor AI & ChatGPT – Udemy
  udemy.com/certificate/UC-708c1b5f-850d-42b3-8ce5-c5355e6a3534
- JPMorganChase - Software Engineering Job Simulation – Forage
  theforage.com
- Learn GitHub Actions for CI/CD DevOps Pipelines – Udemy
  udemy.com/certificate/UC-1d06e26a-430c-4263-863d-2c0f4ac2eb5e
- AWS: Block Storage, Object Storage, EBS, Snapshots, AMIs, Image Builder, EFS – Udemy
  udemy.com/certificate/UC-375188a5-7e52-4bac-aa15-5c4c297fe815

Open Source Projects

- Custom MCP Server (Swift) – Company worklog: Model Context Protocol server in Swift that lets AI agents log work directly on the company portal via LLM Function Calling / Tool Use.
- Job Scraper Pipeline (n8n + Docker + Oracle Cloud) – Self-hosted n8n workflow for automated job-posting web scraping with a custom AI job-relevance filtering node, Google Sheets logging, and cron-triggered Telegram bot notifications.
- OpenCode Agentic Workflows – Terminal-based agentic AI assistant connected to Atlassian, Bitbucket (PR review), Figma (design-to-code), and GitHub (PR creation and code review) for autonomous development tasks.
- Azure Pipeline Mobile (React Native) – github.com/NayanBhut/Azure-PipeLine-Mobile: Cross-platform app for managing Azure Pipelines with build triggering, artifact downloads, and GitHub Actions integration.
- Bitrise Pipeline Mobile (React Native) – github.com/NayanBhut/Bitrise-Mobile: Multi-workspace Bitrise management app with pipeline triggering and real-time build status.
- TestFlight Release Notes (SwiftUI) – github.com/NayanBhut/TestFlightReleaseNotes: App Store Connect API integration for managing TestFlight notes with JSON:API parsing and multi-team support.
